This program deals mainly with practical case studies and certain key subjects, with a pluridisciplinary focus.

It prepares students and professionals for operations such as large acquisitions or market transactions, crossborder mergers, complex financing, restructuring, LBOs, financial engineering, and industrial projects. These are interesting operations, offering difficulties that often lead to innovative solutionseeking. It is particularly educational to study them and analyse the legal, financial or accounting issues raised. Thus, contracts, guarantees, financing and international trade litigation, among other basic subjects, can be studied from different angles.
